Natural Site Solutions

Natural Site Solutions is the exclusive North American distributor of Storm-Klear™ stormwater treatment products by Vanson, Incorporated.

When paired with a particle removal method, Storm-Klear natural products treat stormwater runoff from construction sites to lakes and streams, allowing contractors to remain productive throughout the year.

In addition to stormwater treatment products, Natural Site Solutions offers knowledgeable support and training from experts in water treatment engineering, chemistry, and construction management who are ready to help with all of your construction, post-construction and industrial application questions. Natural Site Solutions offers project-specific consulting services as well.

As part of our support service, we offer downloadable CAD drawings for use in site plans. These drawings are free and are available in both .dwg or .pdf formats.

ABOUT PAGE

Storm-Klear

Storm-Klear products naturally reverse the process of water contamination, reducing turbidity, phosphorous, metals and grease in stormwater.

These products rely upon the unique properties of chitosan, a natural biopolymer derived from crab and shrimp shells. In turbid water, chitosan causes coagulation of sediment particles which then allows for gravity settling, biofiltration, sand filtration, or cartridge filtration.

We offer Storm-Klear in two forms: bulk liquid (Liqui-Floc) and a gel form that offers controlled dosing (Gel-Floc).
